

1. A link to the github repository where your entire codebase resides. Any tests, scripts, sample data, etc. should be included in to this repository. Make sure the teaching staff, particularly but not exclusively your IA mentor, can access your repository.

<https://github.com/ChengShen1996/ASE/tree/iteration1-with-report>

2. The names of the specific files, reachable through the above link, that configure your pre-commit and post-commit CI.

Pre-commit : pre-commit (contains stylecheck.jar google_checks.xml pre-commit)

Setup_pre-commit.sh (Run this file to set up pre-commit on your local machine, run command `./setup_pre-commit.sh`)

Post-commit CI: .travis.yml

3. The names of the specific folders, reachable through the above link, where the post-commit build, style checker / bug finder, and unit testing reports reside. This means you need to configure the tools used during post-commit CI to produce reports that can be saved as files in to your repository.

Unit test reports
